LOCATION
Belo Horizonte, MG · Brazil

TOOLS

R · Python · SQL · Excel · Git/GitHub · Google Workspace

STATISTICS

Inference · Regression · Survival analysis · Model validation · Classification metrics · Imputation · Simulation

DATA

Cleaning & wrangling · Data integration · EDA · Visualization · Reporting

DOMAINS

Healthcare · Oncology · Health economics · Insurance · Pensions

LANGUAGES

Portuguese: native
English: advanced (C1)

SUMMARY

Aspiring data analyst (Actuarial Science, UFMG) with hands-on experience across the full analysis cycle: data extraction, cleaning and integration, exploratory analysis, statistical modeling, predictive model validation and communicating results for decision-making. I currently work with clinical, genomic and economic data, including validating an AI model in a multicenter study and cost-effectiveness analyses for Brazil's public health system (SUS), backed by a foundation in actuarial and financial data from insurance and pensions. I work with R, Python and SQL.

EXPERIENCE

Data Science in Clinical Research
Mar 2026 - present

OncoTag · VICTORIA Project

- Validating an AI model that predicts chemotherapy benefit in triple-negative breast and ovarian cancer in a multicenter study with 5+ institutions, including UFMG, UNICAMP, Mário Penna, Ophir Loyola and Hospital de Amor.
- Incremental cost-effectiveness modeling (ICER) and budget impact analysis for Brazil's public health system.
- Collected, structured and integrated clinical and economic data; communicated results to a multidisciplinary team.

Oncology Research Data Analyst
Apr 2026 - present

Instituto Mário Penna

- Double-blind external validation of a biomarker-based breast cancer diagnostic algorithm: sensitivity, specificity, PPV/NPV, likelihood ratios and accuracy.
- Survival and time-to-treatment analysis on Hospital Cancer Registry data, from extraction to report.
- Analysis of genomic (NGS panel) and clinical data on hereditary cancer, with association tests and odds ratios.
- Designed the statistical methodology for a precision oncology platform.
- Data cleaning, score construction (FSFI), hypothesis testing, correlations, tables and charts.

Undergraduate Researcher, Computational Statistics
Mar 2026 - present

UFMG

- Implemented and benchmarked missing-data imputation methods in R on real and simulated data, evaluated with statistical metrics.

Actuarial Consulting Intern
Aug 2025 - Mar 2026

CCC Consultoria e Assessoria Ltda.

- Cleaned and validated financial and actuarial datasets for technical studies in insurance and pensions.
- Statistical and financial-math estimates; traceable analytical spreadsheets; support for technical reports.

Sales Associate
Jun 2024 - Apr 2025

Outlet de Livro

- Tracked inventory, sales and cash flow in Excel/Google Workspace; cash reconciliation and operational reports.

EDUCATION

B.Sc. in Actuarial Science
2024 - present

Universidade Federal de Minas Gerais (UFMG)

Leadership Program (VLB32)
2023

Latin American Leadership Academy (LALA)
